Configuration  
Manager

NetFlow  
Traffic  
Analyzer

Security isn't something that can be done in a silo. It takes knowledge of your entire infrastructure and the right assets to secure them properly. SolarWinds can help manage threats by providing powerful and easy-to-use software for performance management and integrated security across all platforms.

## MONITOR YOUR ENDPOINTS

**Patch Manager** can help ensure servers and workstations stay up to date with the latest software patches and identifies where you might have a weakness on your endpoints.

[solarwinds.com/patch](https://solarwinds.com/patch)

**Serv-U Managed File Transfer Server** is built so you can safely transfer files across your organization with ad-hoc or scheduled transfers (with audit trails) —and tracks security and compliance requirements.

[solarwinds.com/smft](https://solarwinds.com/smft)

**IP Control Bundle** combines IP Address Manager and User Device Tracker to deliver integrated IP and endpoint management to help network engineers and system administrators eliminate IP conflicts and improve network reliability and efficiency.

[solarwinds.com/ip-control-bundle](https://solarwinds.com/ip-control-bundle)

## MONITOR YOUR APPLICATIONS AND DATABASE

**Server & Application Monitor** monitors servers and applications to help ensure no service degradation has occurred. You can also use the performance data collected from applications to spot security attacks and breaches. [solarwinds.com/sam](https://solarwinds.com/sam)

**Database Performance Analyzer** uses response time and forensic trending across days, months, or years, and features baselines and reports to help identify performance and security anomalies in databases such as Microsoft® SQL, Oracle®, DB2®, and more.

[solarwinds.com/dpa](https://solarwinds.com/dpa)

## MONITOR YOUR SYSTEMS

**Virtualization Manager** can help identify the root cause of problems typically in minutes by quickly drilling into the app, server, virtual, and storage layers to troubleshoot performance issues

[solarwinds.com/vman](https://solarwinds.com/vman)

**Server Configuration Monitor** detects, alerts, and tracks configuration changes to servers, applications, and databases, and includes a policy engine to monitor server configurations against compliance policies.

[solarwinds.com/scm](https://solarwinds.com/scm)

**Access Rights Manager** helps centrally provision, deprovision, manage and audit user access rights to systems, data, and files while helping to protect against security breaches and demonstrate compliance with regulatory requirements.

[solarwinds.com/arm](https://solarwinds.com/arm)

## MONITOR YOUR NETWORK

**Network Configuration Manager** can help ensure network configurations consistently demonstrate compliance with industry and internal best practices, as well as industry regulations and compliance requirements. [solarwinds.com/ncm](https://solarwinds.com/ncm)

**NetFlow Traffic Analyzer** can show you how clients are behaving and helps you find abnormal behavior.

[solarwinds.com/netflow](https://solarwinds.com/netflow)

## BRING IT ALL TOGETHER

**Security Event Manager** is built to combine data from all servers, network devices, applications, and security appliances in your infrastructure and helps identify critical events. By linking a real-time event correlation engine, event normalization, and out-of-the-box rules and reports in a simple-to-use virtual appliance, our solution gives you seamless IT security in your environment.
