

DIGITAL MODERNIZATION | FACT SHEET

Accelerate the power of modernization.

We depend on IT every day to connect – not only to our data and information, but more importantly, to each other. This requires technology and practices that are constantly evolving to overcome changing demands and missions.

GDIT accelerates the modernization of legacy environments and deploys advanced digital ecosystems. We automate routine processes and incorporate managed and shared services to increase cost savings and efficiency. From networks to data centers and high-performance computing, we modernize the entire IT enterprise to power agency missions.

By transforming digital enterprises, our solutions advance cloud, cyber and artificial intelligence, while performing for the present and rapidly responding to the future.

Our approach

IT INFRASTRUCTURE

With a range of capabilities, our IT infrastructure solutions provide full lifecycle management and modernization of enterprise environments including: software-defined networking, telecommunications, disaster recovery, compute, data center modernization and financial analysis.

ENTERPRISE SERVICE MANAGEMENT

Our approach to enterprise service management takes an enterprise view of service performance for seamless visibility across enterprises with a focus on improved user experience and productivity. We align to the user and agency mission with integration techniques, automation and self-healing capabilities.

WORKFORCE PRODUCTIVITY

Users require high performing access to agency systems, anywhere, anytime, from multiple devices. We deliver solutions for our customers so they can access services they need, including mobile and unified communications, collaboration tools, service desk/help desk support, Internet of Things and edge computing.

MANAGED SERVICES

We're empowering agencies with outcome-based managed services, providing them cost efficiencies and innovation. Our flexible models are delivered at scale to meet evolving needs of agencies, from service desk and hosting to security operations centers and cyber services.

AUTOMATION

We're incorporating automation and robotic process automation (RPA) everywhere it makes sense for agencies to reduce repetitive and mundane tasks and improve productivity. From identification and creation to execution, our automation expertise and solutions enable agencies and users to focus on their mission.
