

## Designed for VA Programs to Deliver Comprehensive Ultrasound Training

Point-of-care ultrasound is an integral part of the Military Health System's (MHS) ability to deliver care to the beneficiaries of the Tricare System. However, the opportunity cost of training MHS health care providers on ultrasonography is extremely high due to barriers such as:

Limited Ultrasound-Trained Faculty

Inconsistent Access to Pathology

Lack of Ultrasound Machines

No Performance Assessment Resources

Restricted Time Within Existing Curriculum

Funding

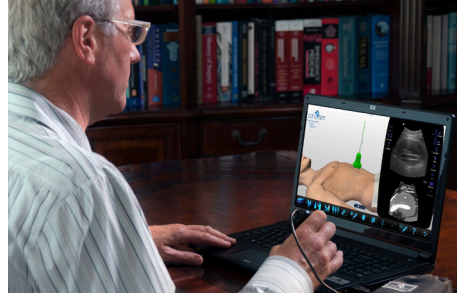

Developed under a DoD SBIR contract, SonoSim has overcome these barriers with its innovative approach to ultrasound training, providing learners from multiple specialties the opportunity to further their education on site.

## Support Resident Education During Rotations

Designed with “flipped classroom” settings in mind, SonoSim provides the foundation necessary to learn ultrasound skills and practice on virtual patients in a risk-free environment. Learners can apply these new skills during rotations under the supervision of trained professionals.

## Earn Continuing Medical Education (CME) Credits On Site

The SonoSim® Ultrasound Training Solution offers over **200 hours of AMA PRA Category 1 Credits™** with each Module offering between one and five CME credits. Learners can access cloud-based course materials 24/7 and complete assignments at their convenience.

## Easily Track Learner Performance Metrics

SonoSim® Performance Tracker allows instructors to track user metrics, review assignments, manage access, and run visual progress reports. Assess ultrasound images scanned in the SonoSimulator and provide feedback to learners.

## 8 Ways SonoSim Supports VA Hospitals

- 1 Anytime, Anywhere Flexible Training**  
Asynchronous learning tools allow medical practitioners the flexibility to customize an ultrasound curriculum that fits their schedule
- 2 Standardized Education & Training**  
Departments can deliver standardized education for group training efforts and in support of resident rotations
- 3 75+ Ultrasound Topics In One System**  
Support education requirements across medical specialties and practice ultrasound skills on a single system
- 4 Built-In Instructional Guidance**  
Hone ultrasound image acquisition and interpretation skills with built-in support tools in the SonoSimulator®
- 5 Scan Real Patient Cases**  
Access 700+ real patient cases covering a broad spectrum of normal and pathologic conditions
- 6 Safe Vascular & Centesis Procedure Training**  
Provide ultrasound-guided procedure training in a risk-free, virtual environment
- 7 Simulate Pathologies on Manikins & Volunteers**  
Seamlessly integrate ultrasonography into simulation scenarios and test clinical decision making with SonoSim LiveScan®
- 8 Create Your Own Ultrasound Training Cases**  
With SonoSim® CaseBuilder, instructors can create over one million unique training and assessment cases
